DETAILED ACTION

The amendment received on January 20, 2006 is acknowledged and entered. Claims 1-8 have been canceled. Claims 9-14 have been withdrawn. Claims 15-20 have been added. Claims 9-20 are currently pending.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 15-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

As per claims 15-20, the invention, as defined by the claims and as best understood merely manipulate an abstract idea or perform a purely mathematical algorithm without any limitation to a practical application in the technological arts. The

Art Unit: 3639

invention is implemented on a computer; therefore, the invention is directed to the technological arts. However, the claimed invention prepares an estimation formula, extracts attribute information, extracts the plurality of first estimation elements, converts each estimation element, creates a third source program, and substitutes the physical unit. The invention does not require physical acts to be performed outside the computer independent of and following the steps to be performed by a programmed computer, where those acts involve the manipulation of tangible physical objects and result in the object having a different physical attribute or structure. See *Diamond v. Diehr*, 450 US at 187, 209 USPQ at 8. The steps of preparing an estimation formula, extracting attribute information, extracting the plurality of first estimation elements, converting each estimation element, creating a third source program, and substituting the physical unit do not impose independent limitations on the scope of the claim beyond those required by the mathematical operation and abstract limitations because the determined rated buying populations and market sizes are not actual measured values of physical phenomena. *In re Galnovatch*, 595 F.2d at 41 n.7, 201 USPQ at 145 n.7; *In re Sarker*, 588 F.2d at 1331, 200 USPQ at 135. The steps of "extracting and substituting" have no direct effect on the physical world outside the computer. Thus, the claimed invention merely inputs data into the system and performs a mathematical algorithm without any limitation to a practical application as a result of the algorithm or outcome and is therefore deemed to be non-statutory.
